

Peritus were awarded a purchase order to undertake a technical assurance review of the INPEX Ichthys Gas Export Pipeline and Flowline FEED. The work was awarded by AMEC the head FEED contractor and required Peritus to review the work undertaken by subcontractor JPKenny. The Ichthys project includes a 900km x 42 inch diameter gas export pipeline that runs from the semi submersible gas processing facility located in about 250m water depth offshore Western Australia to a planned LNG plant located in Darwin. The flowline system consists of multiple rigid CRA flowlines connecting up to 13 drill centres and associated service lines. The work included pipeline design and flow assurance review and was undertaken by Peritus specialists in the Perth and Woking offices.
