Peritus Strengthens its Leadership Team

Peritus International, providers of advanced subsea and floating systems engineering and project management services, has further strengthened its Management Team with the announcement today of the appointment of Thyl Kint as Global Director Floating Systems and Asia Pacific Field Developments.

With more than 25 years oil and gas experience, most of which has been spent managing offshore oil and gas developments around the world, Mr Kint brings with him a proven track record of successfully developing problematic or marginal offshore oil and gas assets, both small and large, within very tight schedules and budgets, and with innovative commercial and technical solutions.

His experience to date includes several FPSO projects, some of the deepest water fixed platform developments in the Gulf of Mexico and Stybarrow, the deepest water development ever delivered in Australian waters.

Mr Kint has previously worked in Europe, North America, Asia and Australia for some of the oil and gas industry's biggest players including Shell, BP, BHP, Kerr McGee, BW Offshore and Spitfire Oil. He also spent several years managing his own successful oil and gas engineering consultancy and a deepwater R&D group.

"Thyl joining our team is a great outcome for Peritus", says Steve Hindmarsh, Peritus CEO. "His breadth of offshore experience aligns well with the Peritus mission to offer floating systems and field development expertise to its clients. Thyl will add a new dimension to Peritus because of his significant experience in working for both Operators and as a Consultant."

Having trained initially as an engineer in Belgium, Mr Kint holds a Masters Degree in ocean engineering and business from the University of California at Berkeley and will now be based out of Peritus' Asia Pacific office in Perth, Western Australia but will have a global role within the company.

About Peritus

Peritus provides advanced subsea and floating systems engineering and project management services for field development and transportation systems to offshore projects across the globe, with a particular focus on difficult and deepwater environments.

Peritus provides services in all phases of project development from concept evaluation through Front End Engineering Design (FEED), detailed design, PMC, EPCM, construction, commissioning and operations with a strong competence in Concept Evaluation and FEED.

The Peritus business model works on a global network of regional engineering centers which enable specialised skills, knowledge and expertise to be shared across global operations. This model delivers lower cost, technically superior subsea and marine solutions for clients.
